### **Science Storms Advisory Committee**

In a world increasingly reliant on science and technology, bringing basic chemistry and physics concepts to life in a way that everyone—especially school students—can understand is incredibly important. The Museum of Science and Industry, Chicago invited some of the country's most prominent experts in many areas of science to help us develop *Science Storms*, an exhibit that provides relevant and cutting-edge science content while allowing children and adults an open-ended and exciting way to interact with science.

The Museum thanks the following committee members for volunteering their time and talents to this project.
